OUR COATINGS

All our exterior coatings are KOMO accredited and suitable for Accoya®
The KOMO Quality Mark guarantees that the quality of a product has been objectively and repeatedly tested by independent experts

exterior

Superior paint for exterior joinery in a range of glorious standard and colour matched colours. These products are designed for maximum performance.

interior

High quality paint for interior joinery available in a range of colours & colour matched. Perfect for use on kitchen units.

product key

■ exterior ■ interior

	waterborne solution		suitable for windows
	eco friendly		suitable for doors
	can be applied with a roller		suitable for dimensionally stable timber
	can be applied with a brush		must not freeze
	can be applied with a spray gun		suitable for electrostatic sprayers
	suitable for systems intended to heat and regulate the flow		

ACCOYA®

All our exterior coatings have been specially formulated to work with Accoya® and its durability and stability helps keep our coatings looking great for even longer.

COLOUR MIXING & MATCHING

colour-matching

Our water-based systems can be mixed to any colour you can think of. This is done using computerised dispensing systems that combine accurate amounts of coloured tints with one of two colour bases by following a recipe. A recipe can contain several different tints. We hold 1000's of pre-loaded recipes on our modern computerised colour library database. Recipes that we have matched to many popular colours and tints from many systems. This means we can call an existing colour recipe up in seconds and dispense the perfect mix immediately.

And if we don't have the recipe, we can often create it same day for you here on-site from your sample or a swatch reference from any other paint system.. including posh paints.

mixing

Our colour mixing is done on site using the latest computer-controlled agitation systems. These systems are designed to thoroughly mix the tints and base together in a controlled way, ensuring a consistent distribution of the tints throughout the base.

Once the dispenser has dispensed the correct amount of tint into the base, we load the can into our mixing system, and it is mixed for a pre-determined length of time. When the product has been mixed, it is labelled with your recipe name and ready for shipping. Our in-house systems can dispense as little as 2.5 litres accurately and quickly.

Two more great reasons to use Mighton Coatings.

matching RAL, NCS and BS4800 standard colours

We can mix traditional RAL, NCS and BS4800 standard colours from our existing library. Like all paint manufacturers, we try and replicate colours as closely as possible. But because of the different processes used by each company, it is possible that the colour produced may vary slightly from manufacturer to manufacturer.

Especially when viewed under different lighting conditions. Therefore, customers are advised to check colours on a small inconspicuous area first by painting a small area first. We strongly recommend the testing be carried out on the actual surface the paint will ultimately be used on as the texture of a surface and even the inconsistencies found in timber can change the appearance of the final colour. We cannot be held responsible for variances resulting from poor lighting, poor preparation etc.

Note | minimum quantities may apply depending on colour complexity.

INTERIOR

coating system guarantee

Our coatings are manufactured by **Anker Stuy** Coatings in The Netherlands.

Anker Stuy produce technically excellent coatings for the joinery industry and guarantee their factory applied coatings for up to 12 years on opaque finishes depending on the colour of the coating & the type of timber used. We are pleased to pass this guarantee on to our customers.

See below for more information on the **Anker Stuy Coating Systems guarantee**

the guarantee

Designed to cover embrittlement, flaking or cracking of the coating system due to a coating manufacturing fault. Full details on what can be claimed along with an example of a specified coating system are detailed in the **Anker Stuy Coating Systems Guarantee** which is available upon request by emailing us at Sales@mighton.co.uk or calling us on **01223 497097**.

we are here to help

We understand that changing your coatings supplier can be a big decision and one that shouldn't be taken lightly. That's why we and our coatings manufacturer **Anker Stuy** are here to help provide you with data sheets and advice. The technical staff at **Anker Stuy** can provide helpful knowledge and advice on the correct products to use as well as the design and construction of timber products.

for further information one how we can help you and your business, give us a call or send us an email.

You can also find lots of useful information at www.mightoncoatings.com

working with other paint systems

Our paints have primarily been designed to work within our own paint system. However, they will also work in conjunction with most other manufacturer paint systems. Before applying our paint with other paint systems, we strongly advise that you test our paint to ensure complete compatibility before final application, as we cannot be held responsible for unsuitable use with different paint systems.

matching RAL, NCS and BS4800 standard colours

We can mix traditional RAL, NCS and BS4800 standard colours from our existing library. Like all paint manufacturers, we try and replicate colours as closely as possible. But because of the different processes used by each company, it is possible that the colour produced may vary slightly from manufacturer to manufacturer.

Especially when viewed under different lighting conditions. Therefore, customers are advised to check colours on a small inconspicuous area first by painting a small area first. We strongly recommend the testing be carried out on the actual surface the paint will ultimately be used on as the texture of a surface and even the inconsistencies found in timber can change the appearance of the final colour. We cannot be held responsible for variances resulting from poor lighting, poor preparation etc.

KOMO certification is a quality mark and the accreditation is a highly trusted and respected international standard that guarantees quality and safety, and ensures that all our paints are not only manufactured to the highest possible standard but are also completely able to accomplish what they are designed to do.

If you have a question about our paint and how to use it, or indeed choose it, then please do contact us, we're here to help.

Technical and safety sheets are available to download from www.mightonproducts.com or by calling 01223 497097.
